- Gather any assets or images you'll need for your game (e.g., ladybug sprite, background images).

Designing the LadybugChase Game

Step 1: Planning Your Game

Before starting to build, sketch out the game mechanics:

- Player controls: How will the ladybug move? (touch, arrow keys, tilt)
- Objectives: What does the player aim to do? (catch leaves, avoid obstacles)
- Scoring system: How are points earned?
- Levels or difficulty escalation (optional)

Step 2: Creating the User Interface

Design a simple layout:

- Add a Canvas component as the main game area.
- Insert Image components for the ladybug and other game objects.
- Include labels to display scores or game status.
- Set background images or colors for visual appeal.

Moving Sprites

Use blocks such as:

- **Set X and Y:** Change sprite positions based on user input or automatic movement.
- **Clock Timer:** Create game loops that update sprite positions periodically.

Collision Detection

Detect when the ladybug sprite contacts another object:

- Use the **Is touching** block to check for overlaps.
- Update score or trigger game events upon collision.

Scoring and Feedback

Implement scorekeeping:

- Create a variable to store the score.
- Increment the score upon successful catches.
- Display the current score in a Label component.

Game Over Conditions
