Each of these parts plays a vital role in the sunflower's growth, reproduction, and survival.

Detailed Diagram of Sunflower Parts

Although a visual diagram is ideal, understanding the parts in a descriptive manner helps clarify the sunflower's anatomy. Here is a detailed breakdown of each component:

1. The Flower Head (Capitulum)

The most prominent feature of a sunflower is its large flower head, which is a composite of thousands of tiny flowers.

- Ray Florets: These are the petal-like structures encircling the perimeter of the flower head. They are usually bright yellow and attract pollinators.
- Disc Florets: Located at the center of the flower head, these are small, tubular flowers that contain reproductive organs. They mature into seeds.

2. The Petals (Ray Florets)

- Also known as the "ray flowers," these are sterile florets that serve to attract pollinators.
- They are elongated and brightly colored to lure bees, butterflies, and birds.

3. The Disc Florets
