Developing a shop inventory management system project NetBeans allows businesses to customize solutions to their specific needs and scale as they grow.

Setting Up Your Development Environment

Why Use NetBeans IDE?

NetBeans is a popular Java IDE known for its user-friendly interface, built-in tools, and support for various Java technologies. It simplifies project management and debugging, making it ideal for developing desktop applications like inventory systems.

Prerequisites

- Java Development Kit (JDK): Ensure JDK 8 or higher is installed.
- NetBeans IDE: Download and install the latest version compatible with your system.
- Database Management System (DBMS): MySQL, SQLite, or similar for storing inventory data.
- Basic Java Knowledge: Familiarity with Java syntax, Swing, JDBC.

Setting Up the Database

Create a database to store product details, stock levels, suppliers, and transactions. For example, using MySQL:

```
```sql
```

```
CREATE DATABASE shop_inventory;
```

```
USE shop_inventory;
```

```
CREATE TABLE products (
```

```
id INT PRIMARY KEY AUTO_INCREMENT,
```

```
name VARCHAR(100),
```

description TEXT,

quantity INT,

price DECIMAL(10, 2),

supplier VARCHAR(100),

reorder\_level INT

);

...

## Designing the Inventory Management System

### Core Features to Implement

A comprehensive inventory system should include:

- Product Management:
  - Add, edit, delete product details.
- Stock Control:
  - Track current stock levels.
  - Update quantities upon sales or restocking.
- Search and Filter:
  - Find products by name, category, or ID.
- Reports and Analytics:
  - Stock reports.
  - Low stock alerts.
  - Sales summaries.
- User Management (Optional):
  - Different access levels for staff.
- Backup and Restore:
  - Data safety features.

### System Architecture

The system can follow a layered architecture:

- Presentation Layer: Java Swing GUI for user interaction.
- Business Logic Layer: Handles data validation, processing.
- Data Access Layer: JDBC for database operations.

## Developing the Application in NetBeans

### Step 1: Create a New Java Project

- Open NetBeans.
- Select File > New Project.
- Choose Java Application.
- Name your project (e.g., "ShopInventorySystem").
- Select Create Main Class.

### Step 2: Design the User Interface

Use Swing components for the GUI:

- JFrame: Main window.
- JPanel: Sections for different functionalities.
- JTable: Display product lists.
- JTextFields: Input fields for product info.
- JButtons: Add, update, delete, search.
- JLabels: Labels for inputs and headings.

Leverage NetBeans' GUI Builder (Matisse) to drag and drop components for rapid interface design.

### Step 3: Implement Database Connectivity

Create a separate class for database connection:

```
```java
```

```
public class DatabaseConnection {
```

```
    private static final String URL = "jdbc:mysql://localhost:3306/shop_inventory";
```

```
    private static final String USER = "root";
```

```
private static final String PASS = "your_password";

public static Connection getConnection() throws SQLException {

return DriverManager.getConnection(URL, USER, PASS);

}

}

...

```

Step 4: Create Data Access Object (DAO) Classes

Define classes to handle CRUD operations. Example for products:

```
```java

```

```
public class ProductDAO {

public boolean addProduct(Product product) {

String sql = "INSERT INTO products (name, description, quantity, price, supplier, reorder_level)
VALUES (?, ?, ?, ?, ?, ?)";

try (Connection conn = DatabaseConnection.getConnection());

PreparedStatement pstmt = conn.prepareStatement(sql)) {

pstmt.setString(1, product.getName());

pstmt.setString(2, product.getDescription());

pstmt.setInt(3, product.getQuantity());

pstmt.setDouble(4, product.getPrice());

pstmt.setString(5, product.getSupplier());

pstmt.setInt(6, product.getReorderLevel());

```

```
return pstmt.executeUpdate() > 0;

} catch (SQLException e) {

e.printStackTrace();

return false;

}

}

// Implement update, delete, search methods similarly.

}

...

```

### Step 5: Implement Business Logic

Link GUI actions with DAO methods:

- On "Add Product" button click, gather data from input fields and call `addProduct()`.
- Refresh the product table after each operation.

### Step 6: Display Data in JTable

Fetch data from the database:

```
```java

public void loadProductData() {

String sql = "SELECT FROM products";

try (Connection conn = DatabaseConnection.getConnection());

Statement stmt = conn.createStatement();

ResultSet rs = stmt.executeQuery(sql)) {

```

```
DefaultTableModel model = (DefaultTableModel) productTable.getModel();

model.setRowCount(0);

while (rs.next()) {

    Object[] row = {

        rs.getInt("id"),

        rs.getString("name"),

        rs.getString("description"),

        rs.getInt("quantity"),

        rs.getDouble("price"),

        rs.getString("supplier"),

        rs.getInt("reorder_level")

    };

    model.addRow(row);

}

} catch (SQLException e) {

    e.printStackTrace();

}

}

...

```

Enhancing the System

Adding Features

- Low Stock Alerts: Notify when stock drops below reorder level.
- Barcode Integration: For quick product lookup.
- Sales Module: Track sales and deduct from inventory.
- User Authentication: Secure access for staff.
- Reports & Export: Generate PDF or Excel reports.

Improving User Experience

- Use clear labels and organized layouts.
- Implement validation to prevent incorrect data entry.
- Include confirmation dialogs before delete actions.
- Provide search filters for quick access.

Testing and Deployment

Testing

- Conduct unit tests for DAO methods.
- Perform integration testing for GUI interactions.
- Simulate typical user workflows.
- Handle exceptions gracefully.

Deployment

- Package the application as a JAR.
- Distribute with database setup instructions.
- Consider creating an installer for ease.

Best Practices for Maintaining Your Inventory System

- Regularly backup database data.
- Keep your code modular and well-documented.
- Update features based on user feedback.
- Stay current with Java and database security patches.
